## Solar Blind

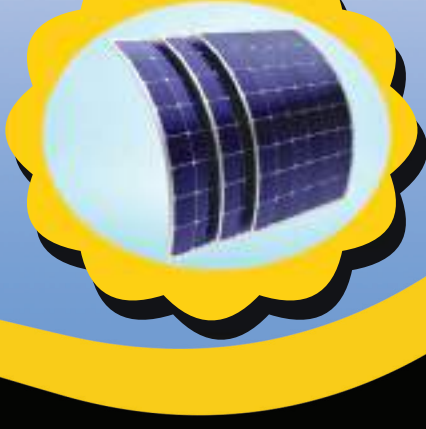

The solar blind is a BIPV technology that provides shade, generates renewable energy, and is safe, cost-effective, durable, and easy to install. It is a window blind which converts visible light, infrared, and some UV light into electricity while blocking UV radiation.

## Flexible Solar Panels

Aton Solar manufactures wide range of semi flexible solar panels which can be easily mounted/ pasted/ installed on the building facades adorning the building elevation while generating electricity from the sun.

We have coloured solar panels, illuminated solar panels, transparent solar panels, solar sign boards and other customisable options.

## Balcony Solar

Modern day living has transformed from independent houses to flats and high rises which limits the usage of solar panels. With balcony Solar, balconies in high rises can now also be used to produce electricity from sun while maintaining the beauty of the building. Balcony Solar can be very cost effective, user friendly, low maintenance BIPV solution for flats and apartments.

## Rooftop Solar

Solar Panels can also be mounted atop the houses/ buildings/ factories and offices which will utilize the vacant roof space to generate electricity from the sun while creating a cooler environment beneath the roof. Transparent solar panels can also be mounted onto the rooftop which will allow sunlight to passthrough giving natural light to the space below
